Why do people put up backyard ponds and waterfalls? Some people would find this just a bit too wasteful of resources. Some would think that putting up a backyard pond and waterfall would be equal to showing off. However, you need to know that people who put up backyard ponds and waterfalls do so for very good reasons.

1) Relaxation – there's something about watching the crystalline water flow from a waterfall that just outs a person's mind at ease. People can spend hours staring at the flowing water and not even feel the time go by.

The sight of a backyard pond and waterfall would have been enough to relax any person, but the sound is just unbelievable. Although large waterfalls emit a roar of sound, backyard ponds and waterfalls actually sing. This fluid lullaby achieves the effect of coaxing the tired spirit to rest. Relaxation is a luxury oft ignored by man in his quest to succeed in life. However, you should know that the man who oft relaxes can work harder than he who does not rest at all.

2) Recreation – some people may consider relaxation as being similar to recreation. However, you should know that there is a world of difference between them.

When people get a backyard pond and waterfall for recreation, it means that people have them for fun. Fun, in this case, may not necessarily involve a physical action. In fact, a person can have fun just watching the ripples caused by the backyard waterfall on the pond. Some people know that you can have lots of fun with a backyard pond and waterfall.

This is especially true if there are children in your family. The untainted imagination of children just makes it possible for them to see the fun side of everything. They would take one look at a backyard pond and waterfall and they would be filled with glee.

3) Horticulture – some people build backyard ponds and waterfalls in order to make the task of watering plants easier. This is often done by people who own a lot of plants or a big garden. Although modern devices and methods are available to provide moisture to these plants, some people think that such technology would ruin the natural look of a garden.

As such, people often try to blend form with function and make their watering systems look like a backyard pond and waterfall. This system, however, needs to both look good and work good in order to be good. Not many people can pull it off. Because of this, you might want to ask for help from experts in building this backyard pond and waterfall.

4) Animals- some people build backyard ponds and waterfalls in order to keep animals in. A backyard waterfall is a great replacement to an air pump if you intend to keep fish in a pond. This is because the motion caused by a backyard waterfall introduces oxygen into the water. It is also a great way to filter water so you don't have to change it often. People put ornamental fish like Japanese Koi or even amphibians to live in the backyard pond and waterfall setting. This way, the backyard pond and waterfall is brought to life. This type of backyard ponds and waterfalls, however, do need to be built carefully in order to support an ecosystem.
