If you've seen a water garden, odds are, you've seen koi fish. The challenge is, how to create the perfect ecosystem for your little friends.

Koi ponds are built so that it can offer the most favorable living conditions for koi fishes. You will find them in backyards in most cases, however, they can also be placed in front yards if there is a lot of available space there. In the process of building koi ponds, the water and oxygen aeration are the biggest consideration. This will of course depend upon the size of the fishes.

Landscaping plays a major role in your Koi ponds. Fortunately, there are plenty of koi pond designs out there for you to choose from. While you may already have some preconceived ideas on how it will be designed, you have to ensure that it fits the whole water garden surrounding perfectly.

Below are some tips on how to build koi ponds based on the kind of landscape that you have.

1. Location.

While you may be tempted to put your Koi pond at the far end of your yard, its important to remember that you will have to continuously monitor its condition. You will have to check the fishes regularly. In addition, you also have to see if the plants are still thriving or if the fish have already feasted on them.

The location of the pond should be suitable for the changing weather conditions. It should not be too exposed during the hot and cold seasons. You can always add some extra protection for the pond in case you are not certain about how it will thrive in that location. Knowing your yard will help you determine where yo can place your koi pond.

2. Space.

Trying to determine the size of your koi pond is not like figuring out any ordinary ponds. This is because of the fishes will get bigger over time. You will be surprised at how much they can grow especially if you are taking good care of them.

The length of the pond is important and will of course depend on the size of your yard, slopes in your yard and overhanging trees, which will decrease the amount of available space.

3. Budget.

You need to have a budget set aside for building a pond for your koi. Take note that some of the fishes and other ornaments for it do not come cheap.

You may want to limit your expenses and make sure you are not overspending for it. Other not-so-important parts and materials can be added later on when you have additional resources. Remember, Rome wasnt built in a day, and neither should your pond.

4. Design.

There are various designs of koi ponds available to be seen over the internet. There will be a wide selection of styles, fishes, and plants, with most of them varying from the traditional to the incredibly unique, depending on the preference of the owner.

The great thing about designing a koi pond is that you can design it so that it compliments not only the rest of your yard, but your home. You can have it curving, square or round; and as a part of the whole landscape scene or let it stand on its own in a particular place.

When you have considered these things, it will be the time to build your koi pond. You have your choice of doing it all by yourself if you have the capability for it. If not, there are specialists out there that could surely build the pond according to your personal tastes and preferences.

Experts suggest that koi ponds should be installed first before the rest of the landscape. That way, problems will be prevented especially if the pond needs or be expanded or extended.

Once you are finished, you will realize that the planning, building and expenses is definitely worth it all. Your koi fish will agree!
